

New Mexico Bird Records Committee Review List
Sartor O. Williams III, Secretary
September 2011

The New Mexico Bird Records Committee (NMBRC) maintains a list of bird species for which it requests documentation of all New Mexico reports. In addition, the Committee requests documentation of all New Mexico reports of species not currently on the official State List and, hence, potentially new to the state. Documentation may be in the form of written details, copies of field notes, photographs (electronic, prints, slides, video, etc.), voice recordings, and/or information on (and the location of) specimens.

Review List species are those that are on the official State List but, in general, have been recorded on average four or fewer times per year over the previous ten-year period. Also included are certain species that occur on average slightly more than four times per year but pose significant identification problems. Finally, certain very locally-distributed species that may be encountered away from their known ranges are included. The Review List is intended to be dynamic, with species added or removed as knowledge of their status warrants. For example, species can be removed from the Review List when frequency of records exceeds Review List criteria. The NMBRC provides standardized reporting forms, which may be obtained from the Secretary or from the New Mexico Ornithological Society website; these forms are intended as an aid in writing reports but their use is not mandatory. Records will be evaluated based on the evidence supporting the proposed identification, regardless of the organization of the report or the type of form utilized.
