CORRIGENDA to Field Notes Vol. XIII, No. 2, 1974-2:

COMMON (=GREAT) EGRET at White Sands 11/23 seen by BP, not GM

ANNA'S HUMMINGBIRDS implied to have been this species in Organ Mts. after 9/13 were so "identified" (and still are a good possibility) by the Editor, not BP

GREAT CRESTED FLYCATCHER record was by MW, not MS

FROM THE EDITOR:

The past season was very interesting in many respects, and I believe that we have something for everybody. In addition, this issue sees the introduction of some abbreviations which are combined shorthand data presentation to convey more information succinctly. The abbreviations used will be given in each issue, just before the species list begins. Any comments on the new system or anything else about the Field Notes are solicited.

The winter was high-lighted by our Christmas Counts, which are detailed in a recent NMOS Bulletin. Among the "finds" of the winter were Snowy Plovers and Dunlins in the Loving area, Red-bellied Woodpecker, Eastern Kingbird, and Short-billed Marsh Wren at Roswell, Sprague's Pipits at Rattlesnake Springs, and Empidonax, House Wrens (including first winter specimen), and Winter Wrens at several places. There was also a major invasion of Mountain Bluebirds and lesser ones of Goshawks, Red-breasted Nuthatches, Western Bluebirds, and Golden-crowned Kinglets, while such carduelines as Pine Siskins and Evening Grosbeaks were scarcer than usual.

Spring brought many unusual records, not the least of which was first verified breeding of the Olivaceous Cormorant and Eastern Bluebird in the state. Unfortunately, Least Tern numbers were down for the population at Bitter Lake NWR, the only one in the state. On a more cheerful note, an amazing 31 species of warblers were recorded in spring, of which 24-- including first verification in the state of Mourning and Canada warblers-- were observed during a banding survey in the eastern third of the state. These surveys also yielded the first Philadelphia Vireo, plus other rarities such as White-eyed Vireo, Veery, and Scarlet Tanager. Near Loving shore-birding was good, including among the finds both White-rumped and Semi-palmated Sandpipers. Other areas of the state also yielded "good" birds, including a pair of Gray Hawks in the southwest, Surf Scoters at Bosque del Apache NWR, and Lawrence's Goldfinches in several places including at Shiprock! Also deserving comment was the expectation that the lush vegetation of the eastern plains and other grasslands might entice greater use by breeding birds, and as the reader will see, meadowlarks did seem to respond while Lark Buntings did not.

con/rec--15 Laguna Grande 5/18-20 (JH).

LEAST SANDPIPER

win/rec--120 in 30 river miles along the Rio Grande near Las Cruces 1/19 (BP), 50 Laguna Grande 1/9 and several hundred 1/27 (JH, GS); uns/rec--2 Farmington area 4/19 (AN) are the first county record; con/rec--39 Tucumcari 4/20, 36 Elephant Butte Lake 3/22 (CH).

LONG-BILLED DOWITCHER

win/rec--5 Farmington 12/14 (AN+); con/rec--3 Bell Lake 4/10 (GS).

STILT SANDPIPER

con/rec--25 Laguna Grande 5/18-20 (JH+).

SEMIPALMATED SANDPIPER

uns/rec--2 among Westerns at Laguna Grande 5/20; details include slightly smaller size, shorter and heavier bill, much less rusty above, less spotted underparts, different voice (JH); note--without direct comparisons under good conditions this species is very difficult to distinguish from the Western Sandpiper, but it probably occurs more regularly--perhaps mainly in spring--than now thought.

WESTERN SANDPIPER

win/rec--25 Laguna Grande 1/9 and several hundred 1/27 (JH, GS); con/rec--1 Morgan Lake 4/19 (WS), La Cueva SGR 4/20 (WH), 380+ Tucumcari 4/20 (CH), 1 Elephant Butte Lake 5/10 (CH), 150 Laguna Grande 5/4 and 5/18-20 (JH+), several Bell Lake 5/6-7 (JH+).

PHALAROPES

uns/rec--30 Laguna Grande 1/27; details include small shorebirds that swam in lake and spun in circles while jabbing in water with bills (GS); note--as the birds were in winter plumage, the observer was unsure of the species; however, any phalarope in the state in January is unusual, and this record is highly interesting.

WILSON'S PHALAROPE

con/rec--2 Bell Lake 5/4-7 (JH+).

GULL

2 that could not be identified to species at Charette Lake 1/21 (MC, JH).

HERRING GULL

win/rec--small numbers in Las Cruces (BP); uns/rec--2 Socorro 5/17 and 5/29 (PB), well north of the usual range in Dona Ana Co.

INCA DOVE

FLAMMULATED OWL

sp/rec--1 found injured in Los Alamos (fide LH), singles banded Cedar Crest 5/3 and 5/4 and a bird banded there 4/72 and recaptured 5/73, again recaptured 5/16 (McK); uns/rec--3 banded at Bell Lake 5/7 (JH+); note--the latter records in the eastern plains may indicate that a migratory route for this species exists there, as there is also a spring record from Portales.

GREAT HORNED OWL

br/rec--nest Quay Co. 4/20 (CH).

BURROWING OWL

win/rec--18 Roswell 12/21 (JC+), 2 near Milnesand 12/7 (KG), 4 Lovington 1/8 (JH, GS), 1 Rodeo 12/28 (RS+); con/rec--3 Shiprock 5/24 (WS).
